WORKERS OF THE WORLD

Exploring global perspectives on labour from the 1950s to the present

How can we arrive at global perspectives on labour, which reach beyond teleologies of an all-encompassing “race to the top” (or “to the bottom”), but also beyond the notion of ever-increasing differentiation? This conference explores overarching trends in the political as well as corporate regulation and in the forms of collective organisation of labour. Such an exploration is understood as a precondition for an adequate analysis of the dynamics of current capitalism. It needs to be based on an examination of linkages and similarities, differences and unevenness, as well as of the wide variety of work constellations resulting from such trends in different parts of the world. Towards this aim, we hope to bring together scholars from the social and historical sciences who are prepared to leave the comfort zone of highly specialized area studies, in a common quest for transnational perspectives. The global economic crisis of the mid-1970s should function as a common point of reference, connecting post-war developments to the immediate pre-history of present constellations. Since this conference aims at identifying new empirical approaches to the study of labour in different world regions, references to methods and data are appreciated.
